Project 4 issue

Community crime prevention programs or strategies target changes in community infrastructure, culture, or the physical environment in order to reduce crime. The diversity of approaches include neighborhood watch, community policing, urban or physical design, and comprehensive or multi-disciplinary efforts. These strategies may seek to engage residents, community and faith-based organizations, and local government agencies in addressing the factors that contribute to the community's crime, delinquency, and disorder.

Project tasks

Your task is to conceptualize a software solution based on the project issue above and create the database that would contain all data for both any mobile and web application which delivers your solution.

- You are **not** required to code any software, simply to create the database storage for the solution you have created.
- You are required to print the documentation section of your project.
- You are required to provide soft copy of all assets.
- Each group will submit a single file. You must print all screens, diagrams and scripts!

Project four (4)

Your are required to develop the database end of this project running on a NoSQL server instance of your choosing that would store the relevant data for the software application. You will need to justify what type of database you will choose.

Project **four (4) tasks**

- Create using a NoSQL database the same data storage from assignment three (3). You are free to use a cloud based NoSQL DB.

- Provide screenshots of completed database instance
- Project Documentation. This outlines how you created and provided your active database instance.
